

**IN THE SPECIFICATION:**

Amend the specification by inserting the following paragraph at page 9, line 14,  
between "however." and "For":

8, In a preferred embodiment, each functional unit may have a SELECT key on the face of the unit. In order to provide increased safety, it is preferable that the system be designed such that selection of a particular functional unit requires that the SELECT key located on the functional unit be depressed in order to select that functional unit. This requirement will help insure that the proper functional unit is selected, in particular when infusion pump units are used for multiple drug infusions. When the desired functional unit is selected, display 106 of interface unit 102 is configured so as to act as the user interface for the selected functional unit. Preferably, display 102 is configured in accordance with a function specific domain to provide function specific displays and softkeys 110 as explained in greater detail in incorporated U.S. Patent No. 5,713,856.
